

Monetical Modules Factsheet

Monetical offers your organisation a cost effective and timely access to the right intellect, collaboration tools and workflows via a 'collaborative consulting platform'. Programme owners responsible for overseeing their organisation's key programmes to delivery performance improvement (e.g. distributed development or Agile adoption) can now follow a predefined consulting schedule ensuring enterprise-wide factors, legacy experience and subject matter expertise is exploited to identify performance challenges and promote best practices.

Monetical is a fully featured consulting software solution supporting a number of enterprise consulting programmes. Each time a consulting programme is created, the right number of Monetical modules are enabled, providing owners with access to just the right intellect, collaboration tools, checklists, audits, guidelines and examples via a single online interface. Programme owners then have the ability to tailor project scope, integrating their own experience to ensure unique business requirements are met and the best course of action is set.

Consulting Modules

Module	Evaluate	Execute	Optimise	Comments
 Manager	✓	✓	✓	Manage each online consulting project – including resources, schedule, scope and financial aspects - via a single dashboard, accessed using a web browser.
 Notifications	✓	✓	✓	Efficiently manage inbound notifications from adjacent project applications or activities to quickly establish best course of action.
 Checklists	✓	✓	✓	A suite of checklists provide a series of go / no go tollgates to help assess industry best practises, consulting firm expertise and complying to client requirements. Integrated diagnosis helps focus performance efforts from analysing symptoms to identifying underlying root causes.
 Benchmark Audits & Surveys	✓	✓	✓	Suite of audits & surveys that helps benchmark each project against industry best practise and the clients' own requirements. Integrated diagnosis helps converting symptoms to underlying root causes.
 Evaluations		✓	✓	Manage project changes efficiently and collaborate with the entire value chain to diagnose root causes, capture impact and identify corrective measures.
 Guidelines		✓	✓	Providing project owners with a constant streamline of supporting material. Pre-assigned and custom project guidelines promote best practices and help address current process, resource and tool weaknesses and ultimately reduce risks.
 Optimisations			✓	Collaborative tools and unique analytical capabilities help understand complex issues and establish the best course of action using an integrated scenario manager capability.
 Tools & Resources			✓	A comprehensive repository of online tools, references & samples helping project owners address issues or exploit existing expertise from within their own organisation or Monetical community.

Evaluate: Rapidly assess the organisation's capability before it embarks on the designated consulting project.

Execute: Guides the organisation through the initial stages of the actual project stages.

Optimise: Enables the enterprise to manage the entire project workflow enabling it to reach and then maintain its optimum performance capability.

Scalability

A single installation of Monetical is a very flexible and a robust environment. A typical implementation can support an active community of 75 registered users during a single day. By deploying the very latest technology (J2E), Monetical uses loosely coupled web services to interface with a number of enterprise

systems, such as ERP and CMS. The same technology foot-print also ensures the successful scale-out (i.e. introduction of multiple sites) and the increase of concurrent users using the load balancing, scheduling and redundancy features.

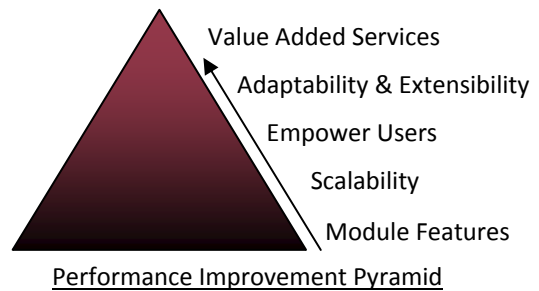

Empower Users

Self programme management and evaluation is possible when exploiting the right knowledge, at the right time and in the most appropriate format, e.g. reports, charts or references. Monetical consulting modules enable the automated data capture, analysis and presentation of this complex knowledge to quantify the key performance challenges and performance improvement opportunities without making an extensive manual investment.

Enhancing real-time project performance management and managing enterprise-wide business changes remain the overriding benefits of this increased user empowerment.

Adaptability and extensibility

The underlying principle behind Monetical unique consulting solution is the recognition that enterprise performance is influenced by the entire value chain and its interoperable capabilities. This is why Monetical performance analysis capabilities let you deal with the symptoms of performance challenges that materialise in one department or function and diagnose the underlying root causes, which may lie in adjacent departments or functions.

This holistic approach is served by the ability to quickly tailor the Monetical modules to specific characteristics of a business unit, departments of functions, e.g. Engineering, Deployment and Support through the deployment of resource management tools, preconfigured root cause maps, corrective measures and individual and hybrid performance reporting functions.

Value added services

To ensure that each Monetical customer makes the most of their investment by realising the greatest performance improvement, they are allocated a dedicated Business Support Analyst. The Business Support Analyst ensures correct tool set-up and configuration, integration with business applications such as PM, CMS, ERP, and tool consulting and support.

The client can call upon the Business Support Analyst in a number of ways:

- Chair or participate in analysis forums
- Manage communication with experts
- Provide product training
- Undertake detailed research
- Create new best practices or reports
